<b>3 Modelling densities or counts using GAM – With an application on deep-sea demersal fishes.....</b>	<b>51</b>
3.1 Introduction.....	51
3.2 GAM using a Normal distribution .....	52
3.2.1 Applying linear regression .....	52
3.2.2 Applying cubic polynomials .....	56
3.2.3 Definition of a GAM .....	57
3.2.4 The moving average smoother .....	58
3.2.5 Cubic regression splines.....	60
3.2.6 Smoothing splines (alias penalised splines) .....	63
3.3 Applying GAM in R .....	65
3.4 Cross-validation.....	68
3.5 Model validation.....	69
3.5.1 Normality and homogeneity.....	69
3.5.2 Independence.....	70
3.5.3 Influential observations .....	74
3.6 Extending the GAM with more covariates.....	74
3.6.1 A GAM with a smoother and a nominal covariate .....	74
3.6.2 GAM with an interaction term; first implementation .....	77
3.6.3 GAM with an interaction term; second implementation .....	80
3.6.4 GAM with an interaction term; third implementation.....	81
3.7 Transforming the density data .....	83
3.8 Allowing for heterogeneity .....	84
3.9 Transforming and allowing for heterogeneity.....	87
3.10 Analysing the deep-sea demersal fish as a count.....	88
3.10.1 How to do it.....	88
3.10.2 Theory behind it .....	88
3.11 Back to model validation; influential observations.....	89
3.12 Modelling the data with an offset .....	90
3.13 Discussion.....	91
3.14 What to write in a paper.....	92

---

<b>5 Hierarchical ZIP models and marmots data.....</b>	<b>201</b>
5.1 Biological introduction .....	201
5.1.1 Reproductive success and marmot natural history .....	201
5.1.2 Description of the data .....	203
5.2 Data exploration and visualisation.....	205
5.2.1 Import the data and first impression.....	205
5.2.2 Number of missing values .....	207
5.2.3 Outliers.....	208
5.2.4 Collinearity.....	210
5.2.5 Zero inflation in the response variable .....	212
5.2.6 Visualisation of relationships between young and the covariates .....	213
5.3 What makes this a difficult analysis?.....	217
5.4 Which statistical techniques and software to apply?.....	218
5.5 Short description of the statistical methodology .....	219
5.5.1 Viewing it (wrongly) as a Gaussian linear mixed effects model.....	219
5.5.2 Viewing it (wrongly) as a Poisson GLM or GLMM .....	223
5.5.3 Viewing it (wrongly) as a zero inflated Poisson GLM.....	224
5.5.4 Viewing it (correctly) as a 2-way nested ZIP GLMM.....	226
5.6 Our model selection approach in ZIP models .....	227
5.7 ZIP results.....	229
5.7.1 ZIP results from the first step .....	229
5.7.2 ZIP results from further steps .....	231
5.7.3 MCMC settings .....	232
5.8 Model interpretation of the ZIP model .....	233
5.9 Model validation of the ZIP model.....	234
5.10 Correlation between observations in GLMMs* .....	237
5.10.1 Correlations in a Poisson GLMM for 1-way nested data .....	238
5.10.2 Correlations in a Poisson GLMM for 2-way nested data .....	239
5.10.3 Correlations in a binomial GLMM for 1-way nested data .....	241
5.10.4 Correlations in a GLMM binomial model for 2-way nested data.....	243
5.10.5 Correlations in a ZIP model for 1-way nested data .....	246
5.10.6 Correlations in a ZIP model for 2-way nested data .....	246
5.10.7 Non-technical summary .....	247
5.11 Correlations for the ZIP model for 2-way nested data .....	247
5.12 Another visualisation of the estimated random effects .....	252
5.13 Discussion.....	253
5.14 What to write in a paper?.....	254
<b>Appendix A. R code and underlying mathematics for Chapter 5 .....</b>	<b>451</b>
A.1 BRugs code for a Poisson GLM .....	451
A.2 BRugs code for 1-way and 2-way nested Poisson GLMMs .....	453
A.3 BRugs code for a ZIP model.....	457
A.4 BRugs code for a 2-way nested ZIP model.....	459
<b>Appendix B. The zero trick for ZIP models.....</b>	<b>462</b>
B.1 The zero trick for a ZIP model.....	462

---

B.1.1 Example 1: The Normal distribution .....	463
B.1.2 Example 2: The ZIP.....	465
